

Chandan Gowda K S

+1 (857) 421-7469; chandan.keelara@gmail.com; [LinkedIn](#); [Portfolio](#); [GitHub](#)

Software Development Professional with 4+ years of backend systems and data analysis experience, transitioning to Academic Research. Gained machine learning and AI experience through personal projects and research initiatives while maintaining industry expertise in ETL pipelines, scalable system architecture, data analysis, and data processing. Master's Computer Science student at Northeastern University eager to apply combined industry knowledge and AI project experience to innovative research projects involving platform development, data analysis, and emerging AI technologies.

ACADEMIC QUALIFICATIONS

MS in Computer Science, **Northeastern University**, Boston, MA

01-2025 to 12-2026

CGPA: 3.89/4

BE in Computer Science, **Nitte Meenakshi Institute of Technology (NMIT)**, Bengaluru

08-2016 to 08-2020

CGPA: 8.76/10

TECHNICAL SKILLS

Programming Languages: Python (4+ years), Java (3+ years), C#, Go.

Database: MySQL, MongoDB.

Data Analysis: NumPy, Pandas, Matplotlib, Data Processing Pipelines and analysis, Large-Scale data system architecture.

Machine Learning and AI: TensorFlow, CNN, NLP systems, Computer vision and neural network development, predictive analytics.

Backend Engineering: Distributed Systems Architecture, Microservices, Database Design, AWS, Kubernetes, Terraform, CI/CD.

WORK EXPERIENCE

Senior Software Engineer, London Stock Exchange Group (LSEG), Bengaluru

08-2022 to 12-2024

- Engineered an event-driven pipeline serving 180+ countries that transformed **7.5M+ XML** compliance records into standardized JSON at **~40 records/sec**, ensuring 99.9% data integrity and compatibility for downstream microservice.
- Architected a multi-queue priority routing framework in **Python** with **AWS SQS and Lambda**, enabling differentiated handling of high-priority KYC/AML screening updates and improving turnaround time for High-priority cases by **35%**.
- Developed scalable microservices in **Java Micronaut**, deployed on **AWS Lambda** with **API Gateway**, to provide low-latency CRUD operations, version management, and workflow integrations for risk-screening data.
- Enhanced performance of Lambda-based APIs by tuning **batch processing** and optimizing cold-start handling, reducing end-to-end request **latency by ~40%** and supporting sustained throughput under large-scale batch loads.
- Hardened system security by integrating AWS WAF, IAM-based secret rotation, and TLS communication across services, lowering **security-related incidents by 50%**.
- Mentored a team of 5 junior engineers and guided teammates through design discussions, code reviews, and knowledge-sharing sessions while coordinating with 7 **cross-functional** teams to ensure data flow migration with zero downtime.

Senior Systems Engineer, Infosys, Bengaluru

10-2020 to 07-2022

- Engineered Python automation workflows to process high-volume enterprise transactions, orchestrating **concurrent** agent executions that improved **throughput by ~3x** without conflicts.
- Integrated microservices and inter-bot communication layers, enabling bots to invoke external APIs and other workflows dynamically, which reduced manual interventions by **50%**.
- Optimized scheduling, **monitoring**, and **error-handling frameworks** to **detect failures** in real time, minimize downtime, and improve data extraction accuracy from unstructured documents by 20%.

PROJECTS

[Computer Vision Security System](#) | Python, TensorFlow, CNN, OpenCV | 

Implemented CNN-based facial recognition achieving 88.2% accuracy using TensorFlow. Built 5-layer convolutional architecture with complete pipeline from image preprocessing to model training and inference for authentication use cases.

[Big Data Analytics Platform](#) | Python, NumPy, Pandas, Matplotlib | 

Analyzed 4.4+ million match records using Python, Pandas, and statistical modeling. Performed correlation analysis and predictive modeling to identify key performance indicators in gaming outcomes.

[Maritime Logistics Platform](#) | Django, MySQL, SQL Algorithms, JavaScript | 

Built port management system prototype implementing Dijkstra pathfinding algorithms directly in SQL with stored procedures. Features multi-role authentication system (Admin/Shipper/Customer) and demonstrates full-stack development with complex database logic.

[Orion PaaS](#) | Go, Kubernetes, Operator SDK, Docker | 

Built a cloud-native Platform-as-a-Service (PaaS) with a custom Kubernetes operator enabling single-file application deployment and environment-aware provisioning, showcasing enterprise-grade scalability and distributed system design.

ACHIEVEMENTS AND CERTIFICATIONS

- Earned **[AWS Certified Cloud Practitioner](#)** certification, demonstrating expertise in fundamental AWS cloud concepts and services.
- Published a paper in IEEE on the topic of “**[Doctor-Patient Assistance System using Artificial Intelligence](#)**.”, developing end-to-end AI architecture combining natural language processing with TensorFlow-based diagnostic models.

EXTRACURRICULAR ACTIVITIES

- Participated in various Hackathons and Online Cyber Security CTF and AWS Gameday competitions and an avid Dota 2 player.
